Industrial Training Overview at Awantec

An overview of technical skill development, project impact, and professional growth.

TRAINEE PROFILE

Mohamad Alif Ridzuan Ahmad

Matric Number: **22300072**

alif.ahmad@awantec.my

JUNE 16, 2026

TRAINING DETAILS

PERIOD

02/03/2026 – 01/09/2026

INTERNAL SUPERVISOR

Assoc. Prof. Mohd Azam Osman

EXTERNAL SUPERVISOR

Azahan Bin Abdul Majid

Company Introduction

Company Profile

Awantec System Sdn Bhd

Founded: 2003

Headquarters: Cyberjaya

Sectors: private

Employees: 50-150

Presence: Local

Subsidiary of AwanBiru Technology Berhad (Awantec)

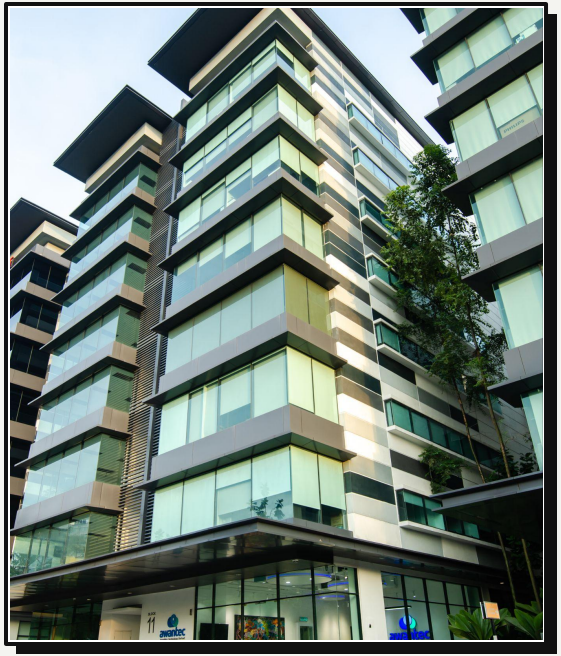

Technology Business

Infra Modernization
Moving to secure hybrid or multi-cloud (IaaS & PaaS).

Smart Analytics & AI
Implementing AI and Big Data tools for decisions.

System Integration & DevOps
Developing custom cloud applications and modern architectures.

Cybersecurity & Services
Threat defense, cloud protection, and application support.

Company Background

2026
Google Cloud
Partner of the Year

Strategic Intent

VISION
To drive sustainable value by digitally transforming businesses and communities.

MISSION
To advance and accelerate the adoption of digitalization throughout Malaysia.

CORE VALUES
- **Respect:** Inclusive, diverse environments.
- **Integrity:** Anti-bribery & transparency.
- **Customer Focus:** Custom ecosystems.
- **Lifelong Learning:** Continuous upskilling.

Key Objectives

CLOUD & AI MODERNIZATION
Transitioning clients seamlessly to secure IaaS, PaaS, and modern Agentic AI tools.

BRIDGE THE TALENT GAP
Eliminating tech shortages through upskilling, certifications, and Talent-as-a-Service.

DRIVE SUSTAINABILITY
Embedding green ICT practices and promoting digital inclusivity in underserved areas.

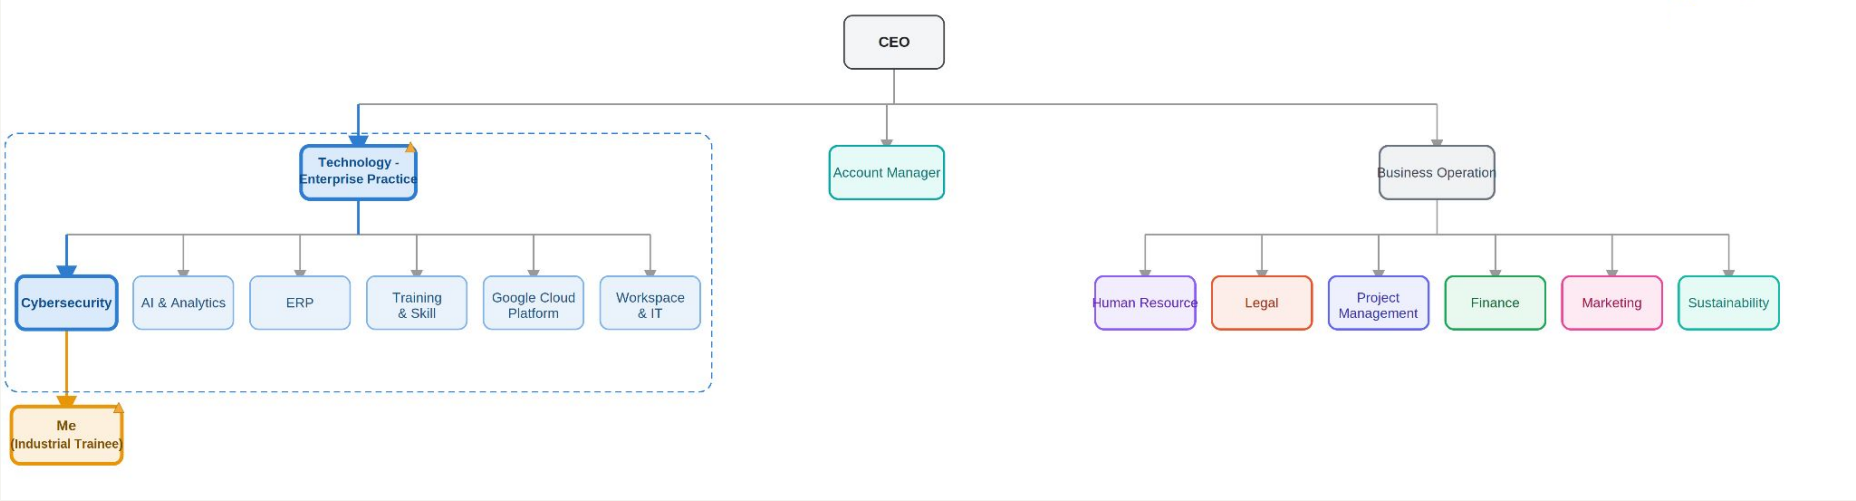

Major Milestones

APAC PARTNER OF THE YEAR
Awarded 2026 Google Cloud Public Sector Partner of the Year for the APAC region.

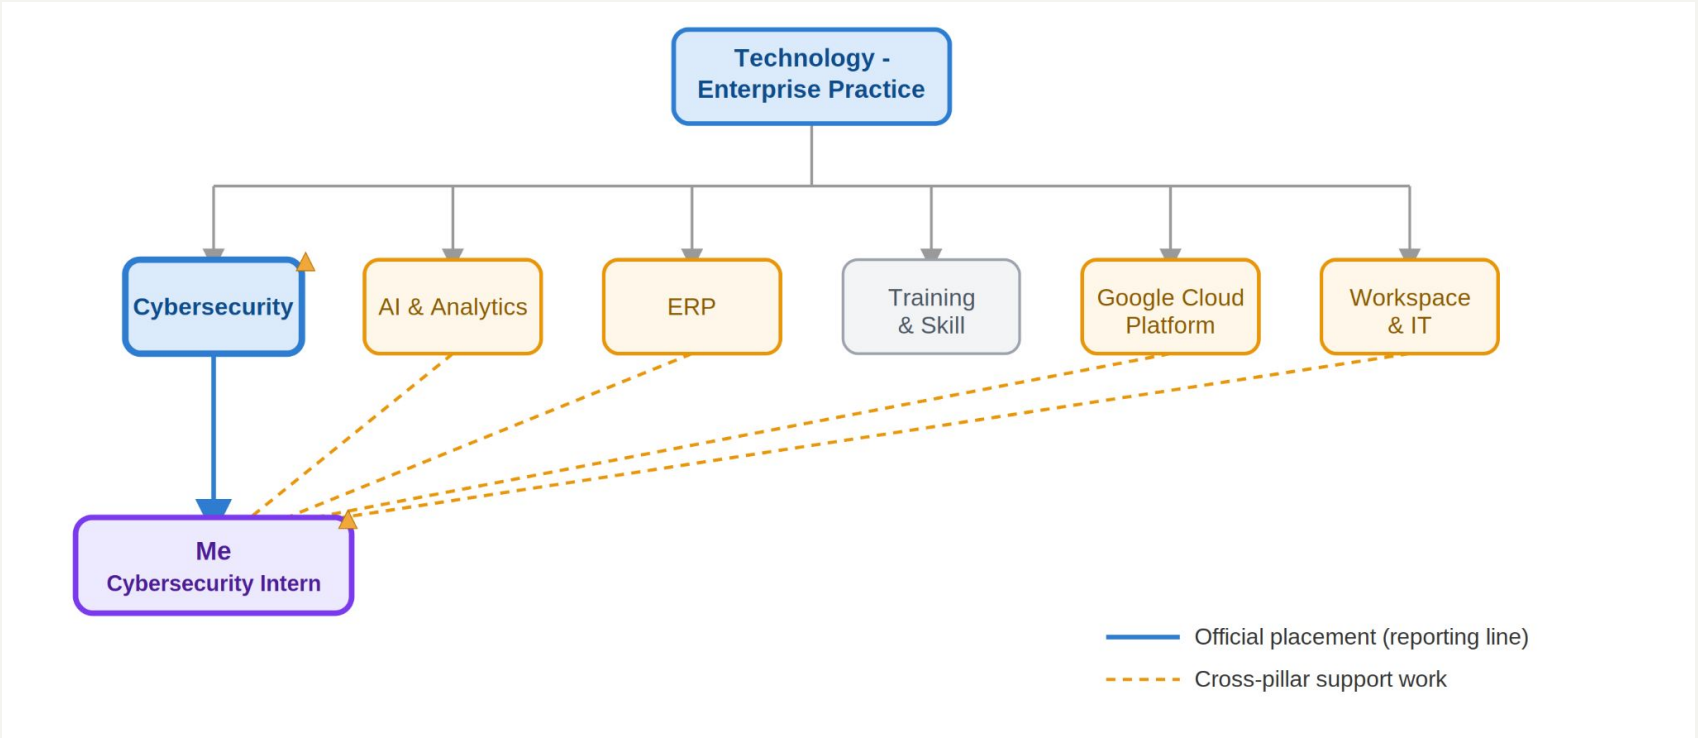

MASSIVE IMPACT SCALE
Distributed over 9M software seats and 330k Skillsoft e-learning licenses in Malaysia.

BOOK OF RECORDS
SiPP Platform holds record for the Largest Participation of Educators in AI Training (July 2025).

Organization Structure

Department Structure

My Role & Responsibilities

DAILY TASKS

- Progressing projects
- Supporting with technical documentations

WEEKLY TASKS

- Attend weekly sync & planning meetings
- Communicate with internal teams & partners
- Document & update overall project progress

SOFTWARE / TOOLS USED

- **Cloud & Security:** EDR Platforms, VAPT, Google Cloud (GCP)
- **Development:** Languages, AI & LLMs, Git & GitHub
- **Operations:** server and switch command line
- **Collaboration:** Google Workspace documentation & slide design

EXPECTED DELIVERABLES

- **Documentation:** Product datasheets, research & test notes, reports
- **Prototypes:** create demo ready prototypes of projects.
- **Education:** Internal training materials, slide decks, & templates
- **Research:** Completed personal cybersecurity research side project.

Technologies Used

Programming Languages

- **Python**
- **JS / TS**
- **HTML / CSS**
- **SQL**

Frameworks & Libraries

- **React** (Frontend)
- **FastAPI** (Backend)
- **Google ADK** (Agent Dev)
- **Vertex AI Search** (Retrieval)
- **Gemini API** (Agent development)

Databases

- **SQLite**
  Used in custom web scraping tool
- **PostgreSQL (Supabase)**
  Hosting personal security side project

Cloud Platforms

- **Google Cloud Platform**
  Core compute and storage services
- **Supabase**
  BaaS for rapid project deployment

Development Tools

- **VS Code** | Git & GitHub
- **Google AI Studio** (Prototyping)
- **Google Antigravity** (AI Assist)

Security & Networking

- **QAX Skyeye EDR** (Endpoint)
- **QAX Gatling** (VAPT Hardware)
- **Port Mirroring** (Switch Config)
- **Ridgebot** Automated VAPT platform
- **Ubuntu and Kali OS** (server hosting and penetration testing)

Projects Summary Overview

1 MONTH

1. QAX EDR and VAPT Testing

Objective: EDR test on internal network.
Role: Technical supporting role.

2 DAYS

2. Sales Security Training

Objective: Train team on cybersecurity.
Role: Material prep, quiz, facilitator.

2 WEEKS

3. Ridgebot Demo

Objective: VAPT solution demo prep.
Role: Slide prep & live demo execution.

2 WEEKS

4. Siswa.ai Landing Page

Objective: Build effective landing page.
Role: Full ownership, planning to deploy.

1 MONTH

5. Court AI Legal Assistant

Objective: AI legal assistant for Industrial Court.
Role: Full ownership until prototype deployment and client POC presentation.

2 MONTHS

6. JPPH AI Chatbot Project

Objective: Develop chatbot for JPPH website.
Role: Support tool dev, testing, documentation.

4 MONTHS

7. A-analyzer

Objective: Develop malware analysis intern project.
Role: Full project ownership.

QAX EDR and VAPT tools Testing

PROBLEM STATEMENT

Awantec recently partnering with QAX, a top Chinese cybersecurity company. Our company want to understand about the technical aspect of the QAX technology in EDR and automatic VAPT.

OBJECTIVE

To test the QAX Skyeye EDR on internal network to gain information on configuration and physical setup and to test QAX gatling automatic VAPT.

METHODOLOGY

We bring the hardware to internal server room, configure port mirroring on main switch, connect EDR and observe captured traffic.For Gatling system, connect it to internal system and run a penetration testing task.

MY CONTRIBUTION

- Help physically connect EDR and VAPT tool to the network
- Navigate dashboard & download PCAPs
- Analyze alerts & generate report
- Communicate with QAX experts

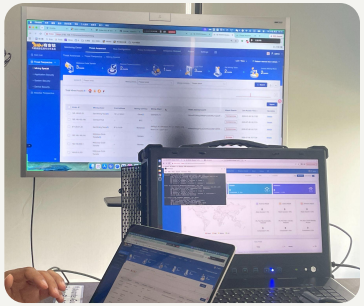

TECHNOLOGY USED

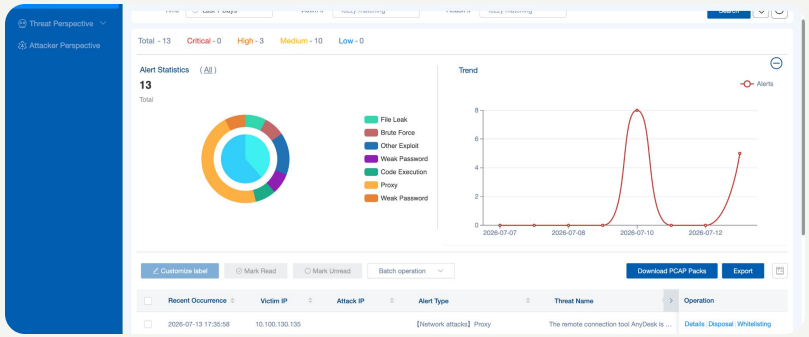

- QAX flyaway kit
- QAX Gatling kit
- QAX Skyeye Software
- Extreme Switch Config

RESULT

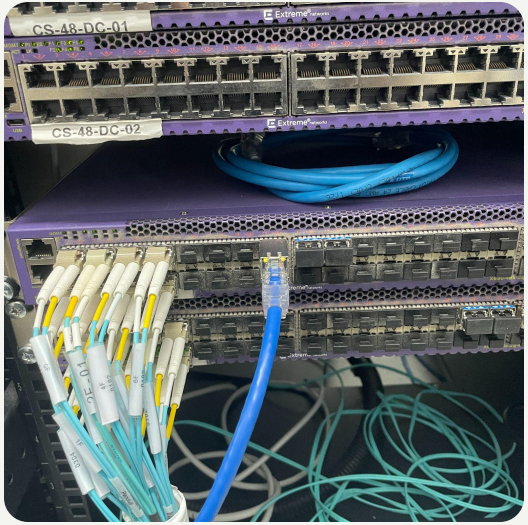

- Visible security alerts from internal network
- Able to expose internal server vulnerability
- Generated sample reports for reference

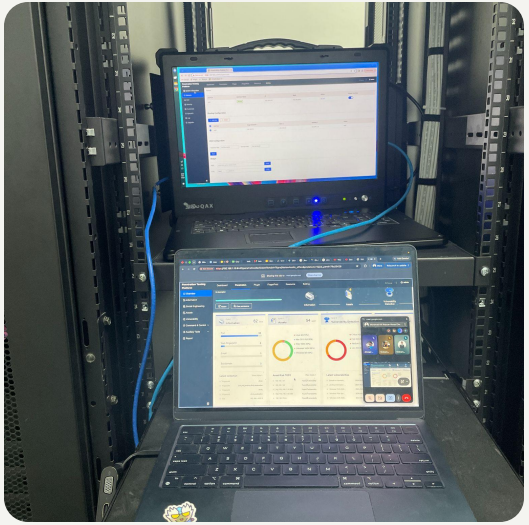

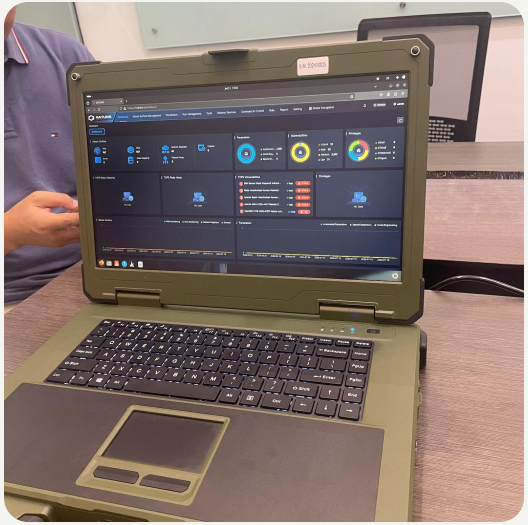

QAX EDR and VAPT Testing

Internal core switch config

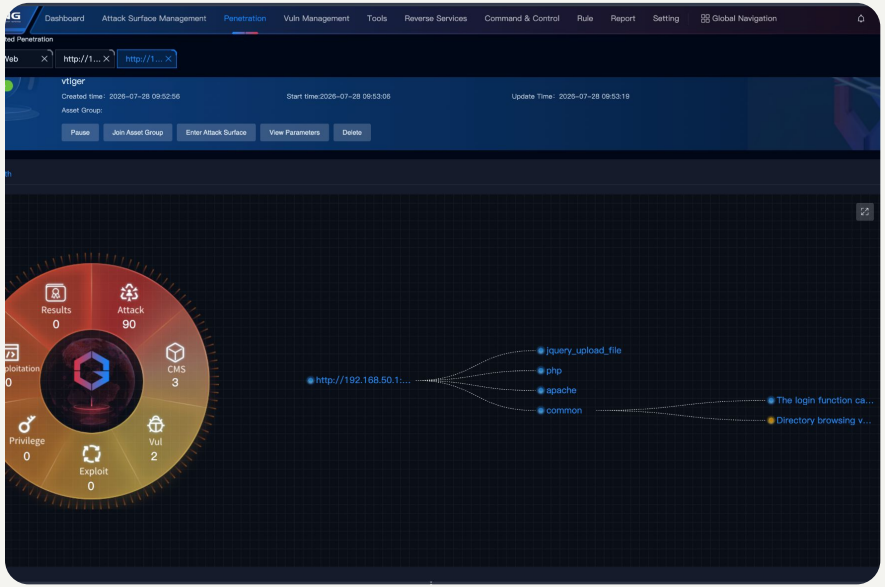

Skyeye Traffic monitoring dashboard

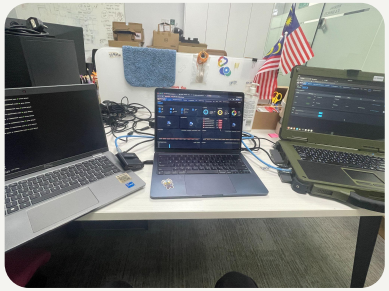

Gatling auto VAPT kit

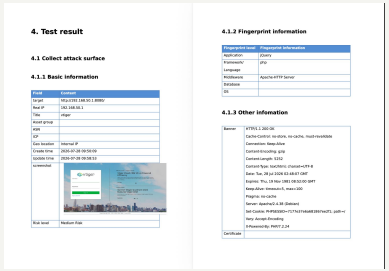

QAX VAPT Testing

Gatling VAPT execution dashboard

VAPT physical setup

Generated VAPT report

Gatling portable VAPT rugged kit

Sales Team Enablement

Enablement Strategy & Goals

Bridging the technical knowledge gap to help the sales team confidently pitch and deliver advanced cybersecurity solutions.

Problem & Objective

Problem: Sales team needs to understand basic security concepts to pitch effectively.
Objective: Train internal sales team to communicate value to clients.

Methodology & Technology

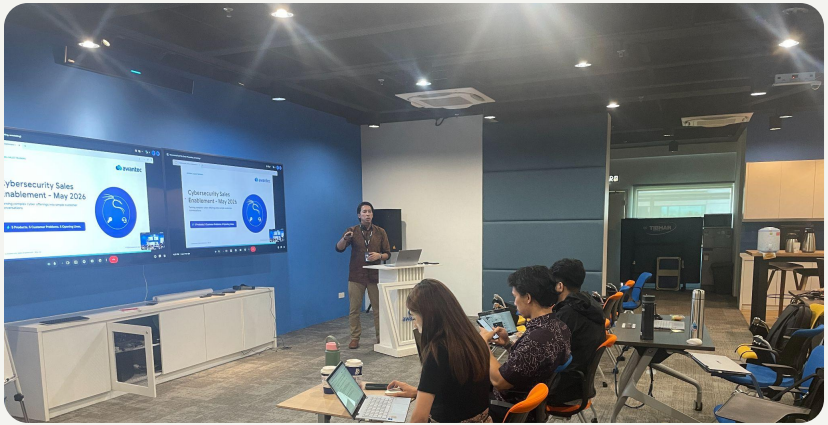

Arranged interactive training sessions, mock client scenarios, and Kahoot! quizzes using General Google Workspace tools.

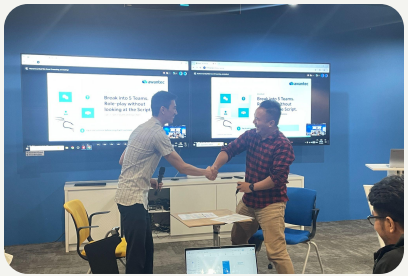

Key Results & Impact

Gave valuable cybersecurity exposure to the sales team, yielding highly positive feedback on all training sessions.

My Contribution

- Help make the training material
- Help facilitate the training

Ridgebot Internal Demonstration

Demonstration Strategy & Goals

Exploring and validating automated penetration testing tools to build internal expertise and presentation capabilities.

Problem & Objective

Problem: Need to understand the new fully automated VAPT platform to sell it.
Objective: Research and prepare a demonstration of Ridgebot tools.

Methodology & Technology

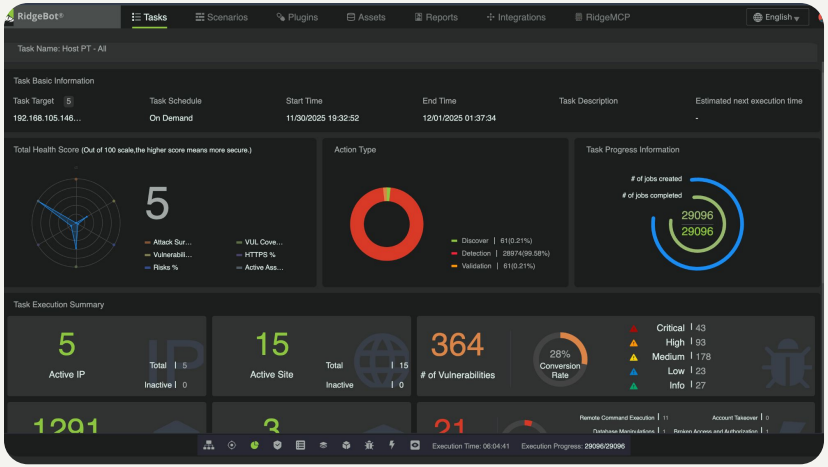

Navigated demo platform, executed test tasks, and prepared mock presentation.
Technology: Ridgebot VAPT platform.

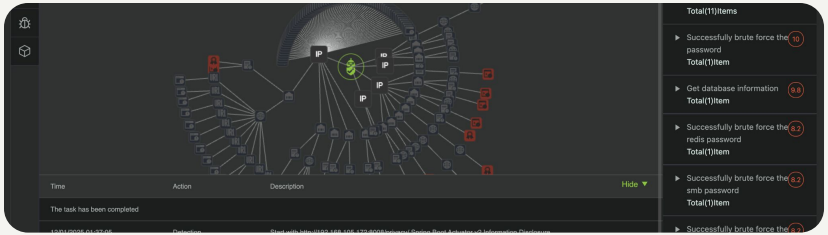

Key Results & Impact

Gained deep understanding of automated VAPT technology and collected constructive feedback for presentation improvement.

My Contribution

Took full ownership, thoroughly studied the platform capabilities, and successfully conducted the mock presentation.

Engineering the Siswa.ai License Verification Platform

Platform Development & Objectives

Building an intuitive verification interface to connect public university students in Malaysia with their free NotebookLM enterprise licenses.

Problem & Objective

Problem: Many public university students don't know they qualify for free NotebookLM enterprise licenses.

Objective: Create a streamlined platform to check license status and guide user registration.

Methodology & Technology

Method: Extract all public university domains for selectors; design UI and routing; develop front-end with React + TS.

Stack: React, TypeScript, CSS, Git, and Google Cloud Platform (GCP) for hosting.

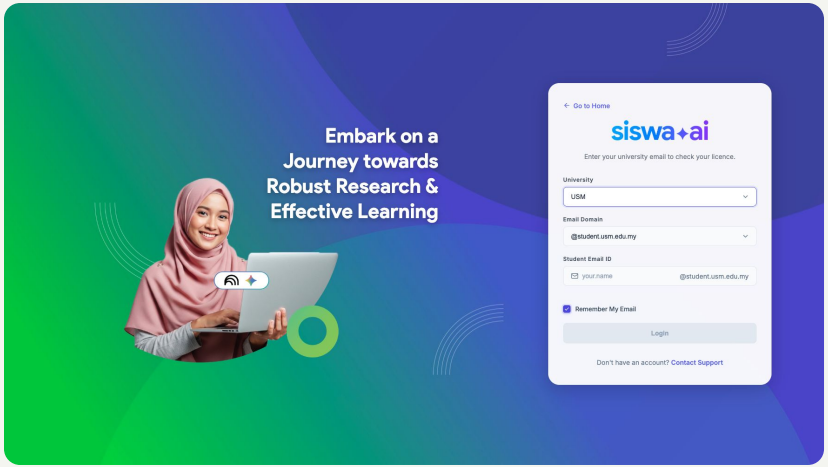

Key Results & Impact

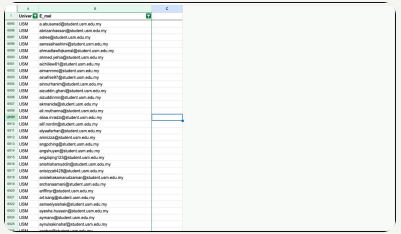

Successfully built, tested, and fully deployed the license verification workflow on GCP infrastructure.

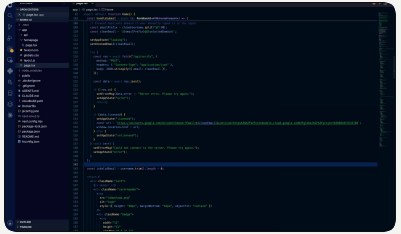

Impact: Actively used by over **100,000+ public university students** across Malaysia.

My Contribution

- Driven project initiation and framed the functional requirements.
- Designed the initial user interface logic and engineered robust domain rerouting scripts.

Industrial Court AI Legal Assistant

AI Legal Assistant & Draft Generator

Overcoming outdated search limitations by creating a comprehensive legal AI agent that searches awards, offers a conversational assistant, and automatically drafts awards.

Problem & Objective

Problem: Industrial court award search function in their website is very outdated with limited capability.
Objective: To create a legal AI assistant that can search specific award, have an AI chatbot, and generate award drafts.

Methodology & Technology

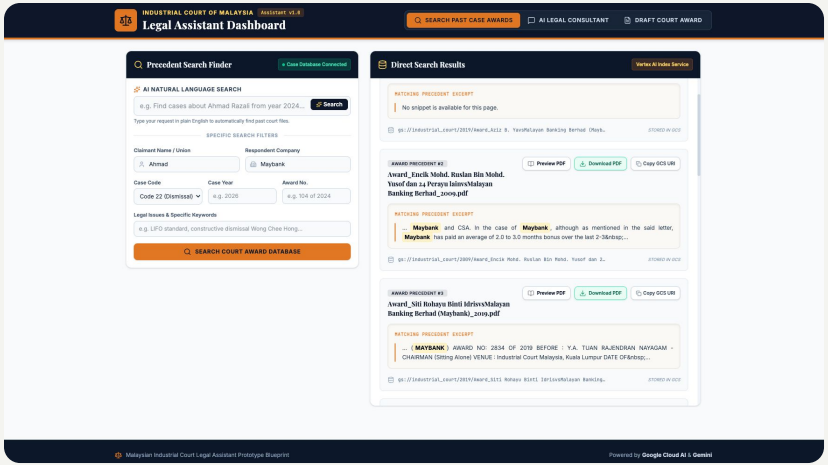

Method: Extract awards via custom Appscript, send to GCP bucket with Rclone; build interface in React, develop agent in Python leveraging Vertex AI.
Tech Stack: Appscript, Rclone, GCP Storage, Vertex AI Search, ADK Framework, React, TypeScript, Python.

Key Results & Impact

Result: Developed a fully functional legal tech prototype presented directly to the Industrial Court of Malaysia.Have a succesfull POC meeting with MPM and ready for next step.
Impact: Modernizes manual legal research processes, transforming how past judicial precedents and awards are queried and synthesized.

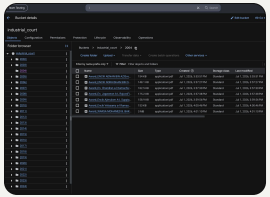

My Contribution

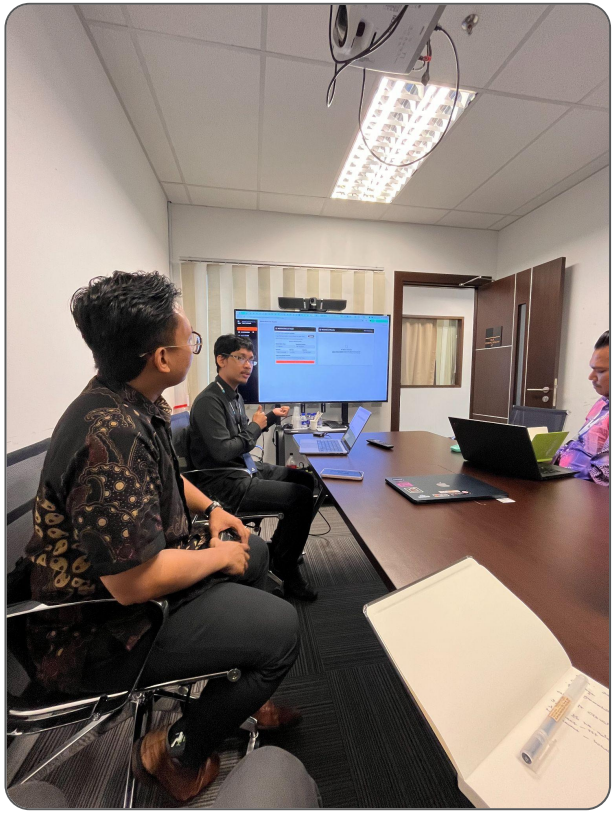

- Exercised full end-to-end ownership, driving the project lifecycle from planning stages.
- Engineered the end-to-end operational code and developed the working assistant prototype.

Iqmal Irsyad Mohammad Fuad 9:22 AM (0 minutes ago)

to Ilyas, Arinn, Azahan, me

Hi Arinn,

Thanks to you and Alif for the hard work on this. We have successfully showcased the POC and MPM agrees to proceed with the next steps.

I have attached the POC acceptance document here for Ilyas's further action regarding the signature.

I am checking with JDN CMO on the next steps.

Thanks and Best regards,

awantec

JPPH AI Chatbot Project

Problem & Objective

Problem: JPPH wants to have an AI chatbot on their official website to make information retrieval easier for users.

Objective: Develop the AI chatbot assistant with a full customization middleware for JPPH.

Methodology & Technology

- Built chatbot and deployed middleware for advanced customization.
- Conducted full chatbot testing in a continuous cycle until handover readiness.

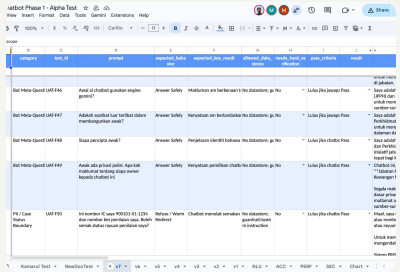

Tech Stack: Python (scripting), Git, GitHub

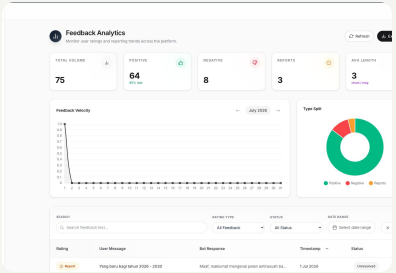

Key Results

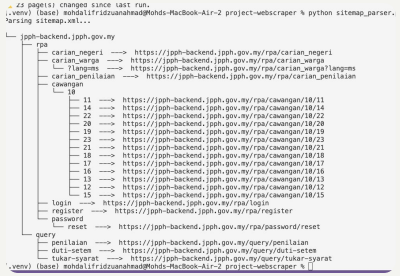

Result: The team successfully deployed and delivered the completed AI chatbot assistant project to JPPH.

My Contribution (Support Role)

- Developed a custom web crawler and monitor tool for internal use.
- Tested AI chatbot security guardrails and validated middleware use cases.
  .Prepare a plan for IaC documentation for client handover

A-Analyzer

Problem & Objective

Problem Statement: In original Job description, I need to propose and do one project or major effort as an intern.

Objective: To build an impactful APK malware analyzer that populates its own threat intel database.

Methodology & Technology

Method: Plan and propose system, continuously develop and present to supervisor, and conduct final internal presentation.

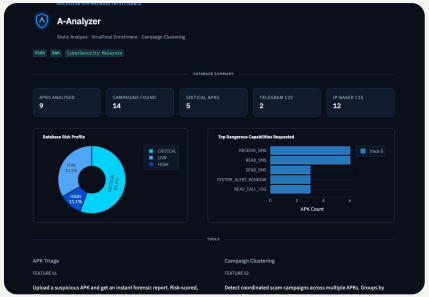

Tech Stack: Python (androguard, plotly, matplotlib, streamlit), VirusTotal & Gemini API, Supabase (PostgreSQL).

My Contribution

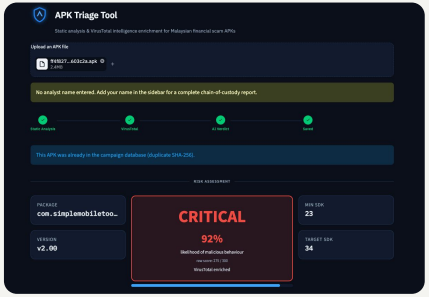

- Exercised full ownership spanning from initial planning, research, and development to final team presentation.

Key Results

Result: Fully deployed system on Streamlit Cloud and successfully gathered valuable feedback during final internal presentations.

Expanding Industry Knowledge Through Strategic Engagements

Strategic Meetings and Partner Visits

Participated in internal GCS meetings and visited the Ishantec partner office in Petaling Jaya to discuss advanced cybersecurity services.

Hosted a technical visit from QAX representatives.

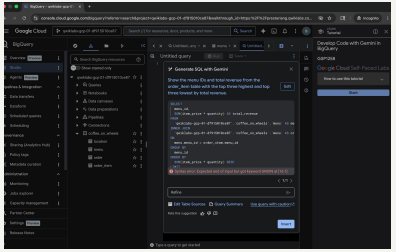

Industry engagements provide critical insights into emerging cybersecurity trends and operational best practices, ensuring alignment with global standards.

Technical Training and Demonstrations

Completed hands-on training for BigQuery SQL utilizing Gemini to optimize data querying.

Attended partner demonstration for key scanning and asset inventory management tools.

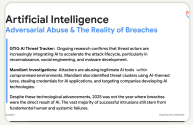

Industry Conferences

Participated in the online Mandiant M-trends 2026 sharing session to stay updated on the latest global threat landscapes and incident response strategies.

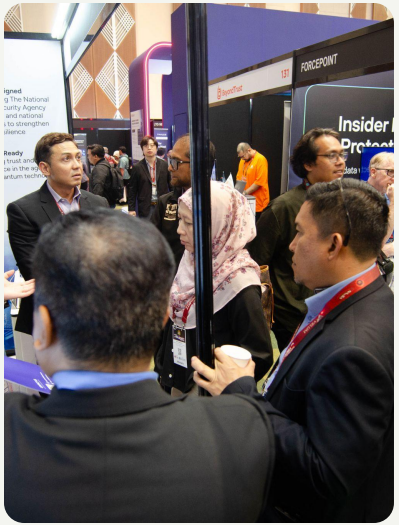

National Cybersecurity Summit 2026

PICC Putrajaya, I work as company delegate.

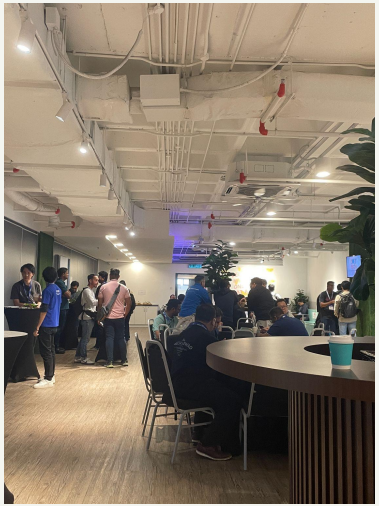

Kurbenetes Comunity Day 2026 KL

Certifications

CompTIA

Security+

Fully Sponsored training and exam by Yayasan Peneraju

ArcX

Threat Analyst

Foundation Level

Cisco

Endpoint Security

From Cisco Networking Academy

IBM SkillsBuild

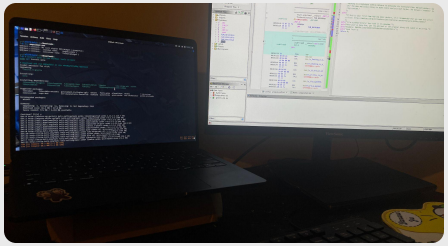

Cybersecurity

From IBM Skill build

Capture The Flag Competitions

OWASP Liga CTF

Actively participated in the OWASP Kuala Lumpur Capture The Flag competition, applying theoretical concepts to practical Digital Investigation.

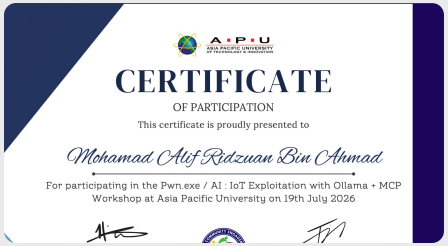

Hack The Box Cyber Apocalypse

Joined the Hack The Box Global CTF with a team consisting of USM and UPNM students to tackle advanced cybersecurity challenges.

Pwn.exe/AI : IoT Exploitation

Workshop + CTF event by APU where I learned to setup Ollama with MCP to use for local internet-of-things vulnerability research.

Conclusion

Learning Outcomes

1. Cybersecurity concepts, tools & business
2. Professional software dev & deployment
3. Development of AI applications
4. Hands-on network & server setup
5. Corporate tech industry experience
6. Communication & management skills
7. Stakeholder expectations management

Academic Applied

- Networking concepts & protocols
- Network security standards
- Security management frameworks
- Software development & programming

Career Aspirations

- Cybersecurity Engineer
- SOC Analyst / Threat Intel Analyst
- Network Engineer
- Network Forensics Investigator
- Software Engineer
